**EVENT** BOWL BARROW Created Early Bronze Age - -2200 to -801

(1) Ploughed down bowl barrow, 26.5m in diameter, 0.4m high. No visible ditch. On the crest of a N-S ridge. (1956). (2) HCC AP ref run 7e185-186 (3) RCHME AP refs: SU5254/23-24

## Site List Report Inc. Events and Sources

<b>EVENT</b>	INHUMATION	Deposited	Early Bronze Age - -2200 to -801
<p>The geophysical survey results suggest the presence of a primary burial associated with the barrow, however the results do suggest that this has been disturbed in some way.</p>			
<b>EVENT</b>	MODERN EVENT	Air Photo Survey	Modern - 1956
<b>EVENT</b>	MODERN EVENT	Geophysical Survey	Modern - 2004
<p>A geophysical survey was carried out to determine the nature and extent of the barrow. The sub circular ditch around the barrow is clearly visible and encloses a number of maculae. A number of further features are identified outside of the barrow ditch and are suggestive of a number of pits associated with the contemporary activity around the barrow.</p>

## Site List Report Inc. Events and Sources

<b>EVENT</b>	HUNTING LODGE	Built	Medieval - 1066 to 1539
<p>A medieval hunting lodge has been identified during geophysics and subsequent excavations.</p>			
<b>EVENT</b>	MODERN EVENT	Air Photo Survey	Modern - 1947
<p>Aerial photography in 1947 revealed the bank and outer ditch of a roughly rectangular enclosure as crop marks (light and dark bands). The enclosure measured c.80x50m overall. A former watercourse was visible on the east side of the enclosure.</p>			
<b>EVENT</b>	MODERN EVENT	Air Photo Survey	Modern - 1947
<p>Crop or soil mark feature observed on an AP dated 1947</p>			
<b>EVENT</b>	MODERN EVENT	Air Photo Survey	Modern - 1967
<p>During Aerial Photography in 1967, it was reported that there was no trace of the enclosure site in a young crop.</p>			
<b>EVENT</b>	MODERN EVENT	Excavation	Modern - 2001
<p>A minor excavation within the ditch area was carried out in September 2001 by Raleigh Place, as well as fieldwalking of the area. Six sherds of C12 to C14 cooking pots, eight sherds of C13 tripod pitcher were discovered; nine C13 to C14 green glazed jug sherds were found as was one C15/C16 decorated fragment of pot rim.</p>			
<b>EVENT</b>	MODERN EVENT	Excavation	Modern - 2005 to 2008
<p>Excavation took place intermitently between 2005-2008 and the pottery evidence suggests that this site continued to be in use beyond the 1170s (previously thought to be abandoned). A large quantity of building rubble was identified within the excavations, the walls were of flint construction and the original structure probably had a vaulted roof.</p>			

## Site List Report Inc. Events and Sources

<b>EVENT</b>	MODERN EVENT	Field Walking	Modern - 2000
--------------	--------------	---------------	---------------

Field walking was carried out in October 2000 within the ditch area of the enclosure and produced a few fragments of late New Forest Ware, and a considerable number of pottery sherds mostly dated to the 11th to 14th centuries, together with a few late medieval or post-medieval sherds.

<b>EVENT</b>	MODERN EVENT	Geophysical Survey	Modern - 2003
--------------	--------------	--------------------	---------------

Geophysical survey undertaken at Tidgrove Warren Farm, near Kingsclere. The survey was carried out by Kingsclere Heritage Association, and focussed on two sites, a medieval royal enclosure and a potential romano-british farmstead or villa. The survey successfully located a number of archaeological features associated with the medieval and Roman sites, including the enclosure ditch of the royal house and structural remains of the farmstead.

<b>EVENT</b>	MODERN EVENT	Metal detecting survey	Modern - 2000
--------------	--------------	------------------------	---------------

The most significant finds as a result of metal detecting within the enclosure were a C13 belt buckle, an iron arrowhead, and a falconner's grommet.

<b>EVENT</b>	MODERN EVENT	Personal Observation	Modern - 1967
--------------	--------------	----------------------	---------------

A further field investigation in 1967 reported that there was now no trace of the enclosure in a young crop and that no surface finds were made.

<b>EVENT</b>	MODERN EVENT	Personal Observation	Modern - 2001
--------------	--------------	----------------------	---------------

Further research & thought led Legg to strongly suggest that this original earthwork, far from being IA, is medieval & the remains of the domus regis built by Henry II in 1172

<b>EVENT</b>	MODERN EVENT	Personal Observation	Modern - 1956
--------------	--------------	----------------------	---------------

In September 1956 a field investigator reported that the enclosure was at the bottom of an eastern slope, but that, apart from the remains of part of the ditch on the south side, there was no trace of the earthwork. It was probably a Romano-British settlement site connected with the field system recorded as centred at SU520545.

## Site List Report Inc. Events and Sources

<b>EVENT</b>	MODERN EVENT	Personal Observation	Modern - 1926
<p>On May 30th 1926 Mr G. B. Bull observed in Bogley Bottom a dark rectangular crop mark in the corn. The mark was 1.5 yards wide and measured approximately 88x44 yards. Mr Bull also reported that Roman pottery occurred in the area and concluded that it was possibly the site of a Roman camp.</p>			
<b>EVENT</b>	PIT	Created	Medieval - 1066 to 1539
<p>A number of large pits were identified with a ram chalk fill. It is possible that these once formed part of a larger structure.</p>			
<b>EVENT</b>	RECTANGULAR ENCLOSURE	Created	Medieval - 1066 to 1539
<p>Bank and outer ditch of a roughly rectangular enclosure measuring 80m x 50m overall was revealed as crop - marks on AP in 1947. The enclosure is sited on the bottom of an eastern slope. Only the remains of part of the ditch c. 8m wide and 0. 3m deep on the south side can be seen (1956). No trace of this enclosure could be seen under young crop, (1967). Finds recovered range from the Roman to post-Medieval periods. Examination of this enclosure suggested strongly that this was the location of the King's Houses (domus regis) which Henry II caused to be built at Tidgrove, the discovery of an oyster shell suggests that the site was indeed high status. NOTE: SEE EVENT No. 11 FOR MEDIEVAL HUNTING LODGE</p>			
<b>EVENT</b>	UNDERCROFT	Built	Medieval - 1066 to 1539
<p>Whilst much of the hunting lodge had been damaged by plough action, significant remains of an undercroft or cellar have been identified as being cut into the hill slope. The undercroft was 2.5m deep, and the flint and mortar walls were 1.2m thick and it has been suggested that this site was similar in scale to the early Clarendon Palace.</p>

**EVENT** DITCH Created Early Iron Age - -800 to 409

A large ditch was identified during the geophysical survey results which has been interpreted as the edge of a settlement feature. The settlement at Tidgrove Warren is based on a simple sub-rectangular enclosure. Two ditches were identified during the excavations. The inner ditch had a V shaped profile, demonstrated no evidence of being recut and was 1.2m deep. Whilst the outer ditch had a shallow profile and demonstrated evidence of being recut.

<b>EVENT</b>	<b>INHUMATION</b>	Deposited	Roman - 43 to 409
--------------	-------------------	-----------	-------------------

A number of infant inhumations were identified within the trenches in addition to up to 9 other adult individuals. There were varying degrees of preservation and many had been disarticulated. Two of the neonates had puncture wounds to their skulls, and whilst this may be the result of post burial disturbance it cannot be ruled out that this may be a deliberate trauma. It is thought that the neonates were buried around the same time.

<b>EVENT</b>	<b>MODERN EVENT</b>	Excavation	Modern - 2004
--------------	---------------------	------------	---------------

A excavation was carried out after the results of a geophysical survey suggested the site of Romano-British settlement. The excavation, in the main, focused on identifying the extent of the settlement and identifying the longevity of its useage. The ditches of the rectangular enclosure were excavated and a number of neonate burials were found within this. The material deposits point to a late Iron Age foundation for the settlement.

<b>EVENT</b>	<b>MODERN EVENT</b>	Geophysical Survey	Modern - 2003
--------------	---------------------	--------------------	---------------

Geophysical survey undertaken at Tidgrove Warren Farm, near Kingsclere. The survey was carried out by Kingsclere Heritage Association, and focussed on two sites, a medieval royal enclosure and a potential romano-british farmstead or villa. The survey successfully located a number of archaeological features associated with the medieval and Roman sites, including the enclosure ditch of the royal house and structural remains of the farmstead.

<b>EVENT</b>	<b>MODERN EVENT</b>	Magnetrometry survey	Modern - 2004
--------------	---------------------	----------------------	---------------

A magnetrometry survey was carried out over the potential Romano-British Site. The results demonstrated anumber of features that would substantiate the presence of a settlement.

<b>EVENT</b>	<b>MODERN EVENT</b>	Resistivity survey	Modern - 2004
--------------	---------------------	--------------------	---------------

A resistivity survey was carried to determine the extent and nature of a Romano-British Settlement, the survey picked up a number of features that would be consistant with the presene of a building.

<b>EVENT</b>	PIT	Created	Roman -	43 to 409
<p>The position of the trenches aimed to identify the large ditch features however a small number of pits were identified within the excavations.</p>				
<b>EVENT</b>	POST HOLE	Created	Roman -	43 to 409
<p>A number of post holes were identified during the excavations, however further investigations of the inside of the enclosure will be needed to determine the nature of the settlement.</p>				
<b>EVENT</b>	RECTANGULAR ENCLOSURE	Created	Roman -	43 to 409
<p>A ditch with a U shaped profile created the sub-rectangular settlement enclosure with a break along the eastern edge suggesting the position of the entrance. The fill of the ditch contained animal bone and pottery of a Roman date.</p>				
<b>EVENT</b>	SETTLEMENT	Created	Late Iron Age -	-400 to 409
<p>A Romano-British Settlement was identified during the geophysical survey of 2004. A number of features associated with a possible structure were visible.</p>				
<b>EVENT</b>	SETTLEMENT	Occupied	Roman -	43 to 409
<p>There was sufficient evidence in the excavations to demonstrate that this was an area of settlement.</p>				
<b>FIND</b>	AMPHORA	CLAY	-	43 to 409
<b>FIND</b>	ANIMAL REMAINS	BONE	-	43 to 409

<b>EVENT</b>	MODERN EVENT	Geophysical Survey		Modern - 2005
	<p>The results of the 2005 geophysical survey were successful in locating a number of features associated with the Romano-British settlement at Tidgrove Warren Farm. The results show the extent and nature of the settlement as a whole, including the outer and inner enclosures, and associated structural remains, and evidence of agricultural activity. Evidence for a number of potential industrial features has also now been recorded to the west of the modern hedgerow. There appear to be at least four possible kilns or corn-driers spread along the ridge. The western and northern limits of the settlement also appear to have been reached. There does not appear to be any evidence of substantial structures of the form and scale of a vill at the site. The badly disturbed nature of archaeological deposits in the western part of the settlement can also be seen in the survey results.</p>			
<b>EVENT</b>	SETTLEMENT	Occupied		Early Iron Age - -800 to 409
	<p>A number of archaeological features associated with the Iron Age and Roman phases of settlement in the area, including the extension of the settlement.</p>

<b>EVENT</b>	AISLED HALL HOUSE	Built	Medieval - 1066 to 1539
--------------	-------------------	-------	-------------------------

---

The 2005-07 excavations discovered an aisled hall to the northwest of the cellared building. The foundations had been robbed but there was evidence of two rows of three support beams and a narrow slot for the walls of the building. Several features were noted beneath the floor and were felt to relate to a previous hall or earlier, prehistoric, activities.

---

<b>EVENT</b>	CELLAR	Built	Medieval - 1066 to 1539
--------------	--------	-------	-------------------------

---

The 2005-07 excavations uncovered the remains of a cellar situated close to the southern enclosure ditch. This was a flint and mortar walled structure measuring approximately 8m x 4.5m wide. It would have been accessed by a set of steps to the northeast corner. Hollows cut into the chalk floor suggest the presence of fittings within the cellar. In addition, a medieval key was found close to the chalk floor surface. The cellar was a grand structure, with plastered flint-lined walls and a side entrance with stone-lined stairs. It probably had a stone barrel-vaulted roof with buildings above it.

---

<b>EVENT</b>	ENCLOSURE	Built	Early Neolithic - -4000 to 42
--------------	-----------	-------	-------------------------------

---

The 2005-07 excavations were concentrated within two enclosures. The smaller inner one was felt to be of prehistoric date, although no firm dating evidence was found.

---

<b>EVENT</b>	ENCLOSURE	Built	Medieval - 1066 to 1539
--------------	-----------	-------	-------------------------

---

The 2005-07 excavations were concentrated within two enclosures. The larger outer enclosure was felt to be of later date than the prehistoric inner one. A medieval date was suggested for this feature.

<b>EVENT</b>	MODERN EVENT	Excavation	Modern - 2005 to 2007
<p>Southampton University carried out fieldwork in the area around Tidgrove Warren Farm from 2005-07 in order to investigate the patterns of prehistoric/Roman/medieval settlement in an area of lowland close to the line of the Portway. This work focused on a medieval ditched enclosure and identified a number of multi-period features. These comprised a small prehistoric enclosure, a larger medieval enclosure, the remains of a medieval cellared building and aisled hall along with a possible well or latrine. These features may be related/described by other sites in the area. Therefore see also Monuids 21127, 36924, 36925, 36926, 56882, 56883 and 57174.</p>			
<b>EVENT</b>	MODERN EVENT	Geophysical Survey	Modern - 2004
<p>A geophysical survey using resistivity and magnetometry was carried out in 2004 to determine the nature and extent of the archaeology at Tidgrove Warren Farm. Within this survey two barrows and the nature of the Romano British settlement were identified.</p>			
<b>EVENT</b>	WELL	Built	Medieval - 1066 to 1539
<p>The 2005-07 archaeological excavations reported a large circular feature. This feature cut the earliest ditch edge and was identified as a possible well/latrine.</p>
